Introduction:

PCVITA EDB Converter is top-rated software, especially designed to export EDB mailboxes to individual PST files without Exchange Server. Use the software to repair badly corrupted EDB file and recover emails data from lost or damaged segments. You can extract single or multiple mailboxes (as selected) from un-mounted Exchange database. Tool extracts data from Pub.EDB (Public Folder) and Priv.EDB (Information Stores) over all Exchange Server Editions (Microsoft Exchange 2010, Exchange 2007, Exchange 2003 and all).

Read more on Product Page - <http://www.pcvita.com/edb-converter.html>

Difference between Demo & Full Version:

Demo Version: The free trial edition is limited to convert only first 15 items per user mailbox from EDB file and save into PST file (location selected by user).

Download Now - <http://www.pcvita.com/downloads/software.php?id=31>

Full Version: Full version is necessary to do complete conversion. It exports all mailboxes from EDB file to PST file. The product is available in 4 type license (personal, academic, enterprise, commercial) starting at **\$299**.

System Requirements:

- **Operating System:** Any Edition of Windows OS (32-bit recommended)
- **Processor:** 1Ghz Processor (2.4 GHz is recommended)
- **RAM:** 512 MB of RAM (1 GB is recommended)
- **Disk Space:** 20 MB free hard disk space
- **MS Outlook Edition:** Any version of Outlook 2010, 2007, 2003 (32-bit only)

Software Pre-Requirements:

- Outlook (32 bit) must be Installed on PC (If you don't have, [download 60 Days Free Trial](#))
- MS Outlook should be Configured with any POP3 (valid or dummy) Profile and set as default. ([know how to configure](#))
- MS Outlook should be set as default email client ([Know how to set](#))
- MS Outlook should be closed at the time of conversion
- MS Outlook should not be connected with Exchange Server
- EDB file should not be mounted with Exchange Sever

(Note: If any pre-requirement is not fulfilled then user may get an Empty Output Folder containing empty PST. For more help, [contact to support team](#))

Steps to Download - PCVITA EDB Converter

Follow the below steps to download software setup:

1. Click on Download URL - <http://www.pcvita.com/downloads/software.php?id=31>
2. In File Download Window – Click on Save button
3. In Save As Window – Select location to save “pcvita-edb-converter.exe” >> Click Save
4. Software will be downloaded in few minutes.

Steps to Install - PCVITA EDB Converter

Follow the below steps to Install Software Setup:

1. Go to Location where “pcvita-edb-converter.exe” setup is saved >> Double Click on it
2. Open File window pops up >> Click on Run button
3. Welcome screen pops up >> Click on Next button
4. Select “I accept the agreement” >> Click on Next button
5. By default setup will be installed in “C:\Program Files\PCVITA EDB Converter” location
Or Click on the Browse button to select desired location to install. Click on Next button
6. Setup creates program shortcut. Click on Next to proceed further
7. Select if you want to create desktop & quick launch icon >> Click on Next
8. Now PCVITA EDB Converter is ready to install >> Click on Install button to proceed installation process.
9. Progress bar shows the installation process that completed within few seconds
10. Select option to ‘Launch PCVITA EDB Converter’ (if desired) and Click on Finish button.

Steps to Uninstall - PCVITA EDB Converter

Follow the below steps to Uninstall Software Setup:

1. Go to Start button >> All Programs >> PCVITA EDB Converter
2. Click on Uninstall PCVITA EDB Converter

OR

1. Go to Start button >> Click on Control Panel
2. Click on Add or Remove Programs >> Select PCVITA EDB Converter
3. Click on Remove button

Software Working Steps

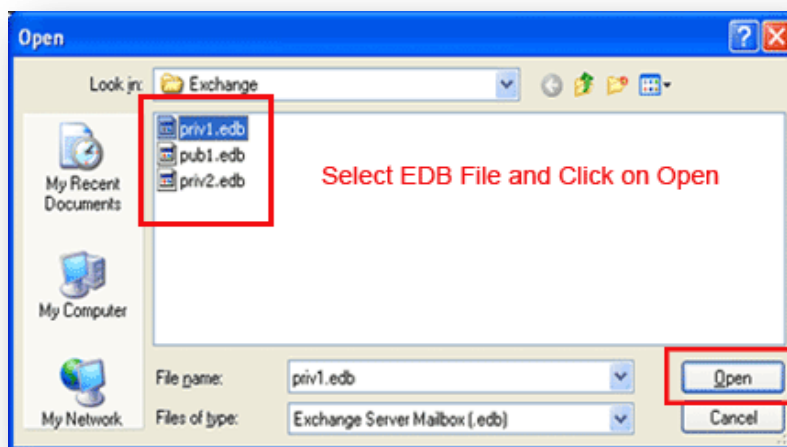

1. Launch PCVITA EDB Converter. For that, Go to Start button > All Programs > PCVITA EDB Converter > EDB Converter. Startup screen comes up, click on **Open** button to select file.

2. Click on **Browse** button. Now you can select the desired Offline EDB file from your PC.

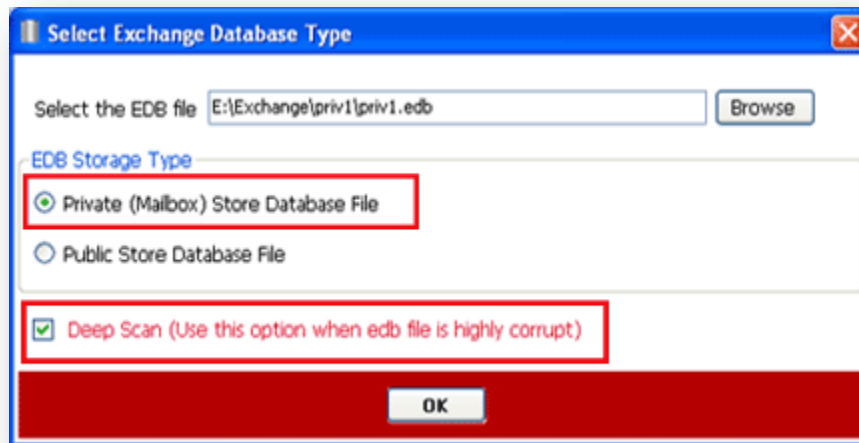

3. To extract Mailboxes, select Priv or Mailbox Database.EDB file. To extract Public Folders, select Pub.EDB file. After selection, click on **Open** button (Here priv.edb file is selected).

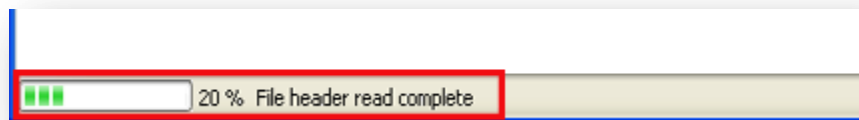

- Now Select the EDB Storage Type. (Here, we are selecting Private store database as we selected priv.edb file).

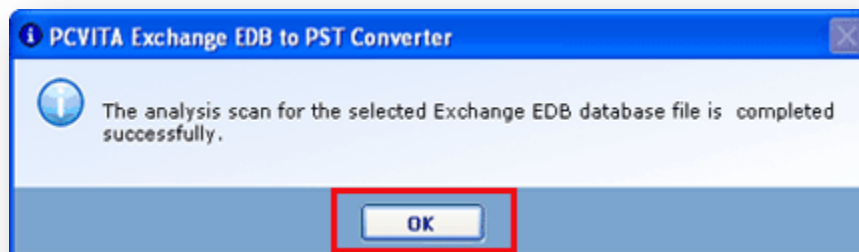

Select Deep Scan option to deeply scan and repair the corrupted EDB file in case where EDB file is badly damaged or some data is missing. Then click on **Ok** button.

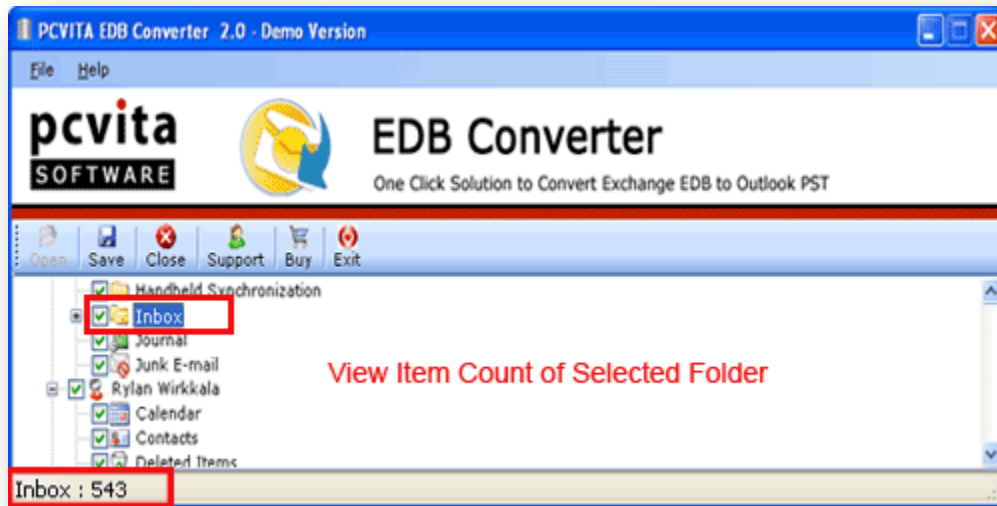

- Scanning & Recovery process begins; Status bar shows the percentage of recovered edb. Wait until the process gets over, it may take time if file size is very large or deep scan option checked.

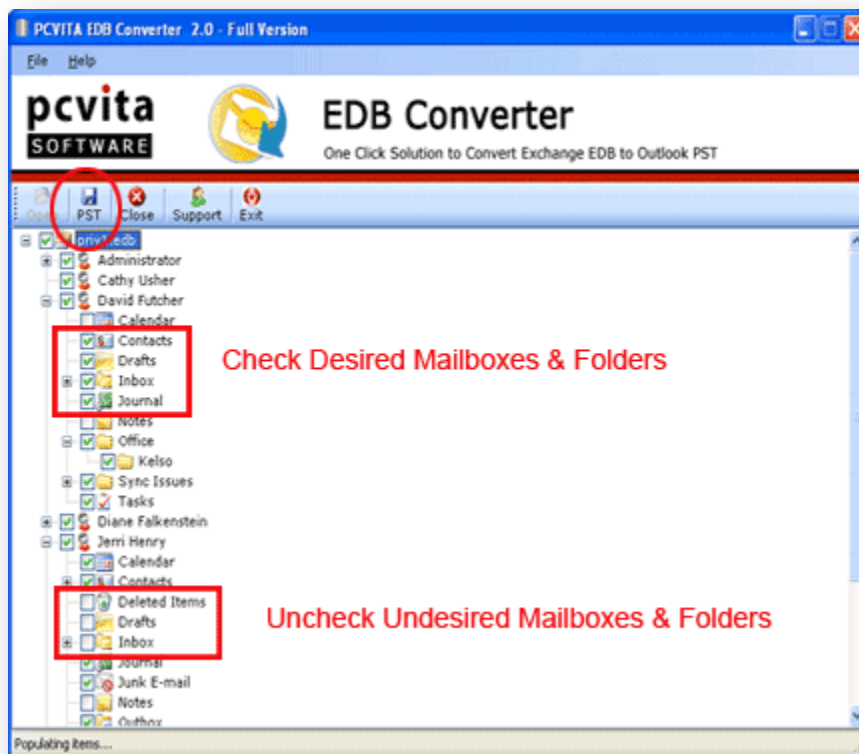

- As the scanning process gets over, confirmation screen comes up that shows the recovery of EDB file is completed. Click on **Ok** button to continue further.

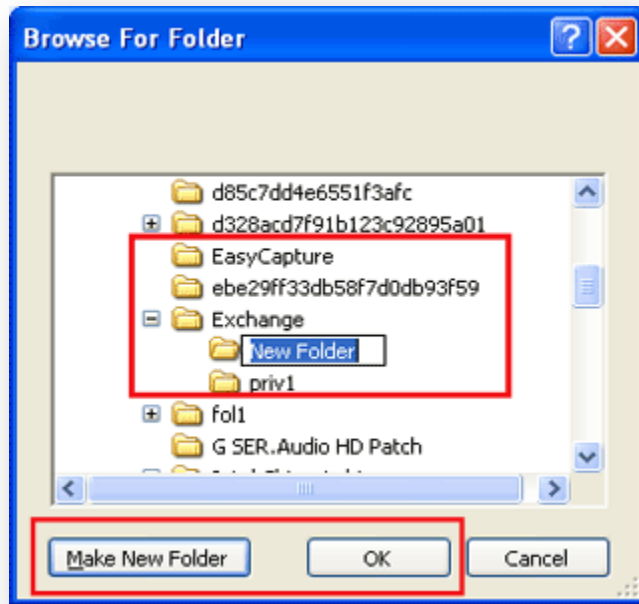

7. After completion of scanning process, you can view, analyze and expand all recovered mailboxes with all folders and subfolders aligned in original sequence. **Select** particular folder to view number of items stored inside that folder.

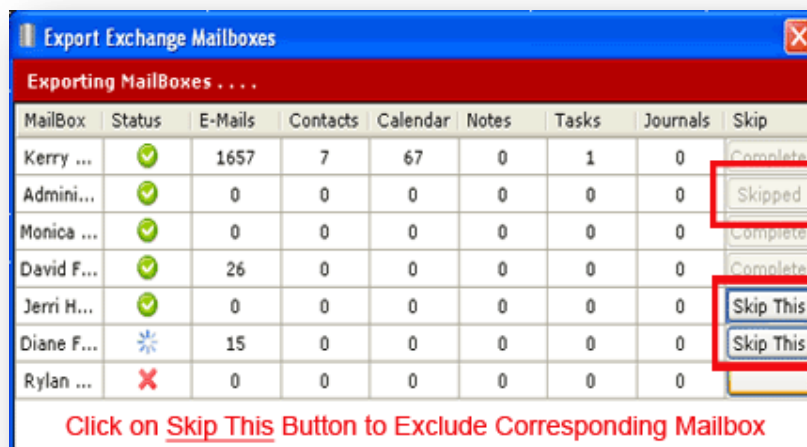

8. By default, all items are selected but you can also export only selected mailboxes and folders/subfolders. Select desired mailboxes and click on **PST** button:

9. "Browse for Folder" window comes up, select location to save the output (PST) file (As per the need, you can create a new folder too). Select desired location and click on **Ok** button.

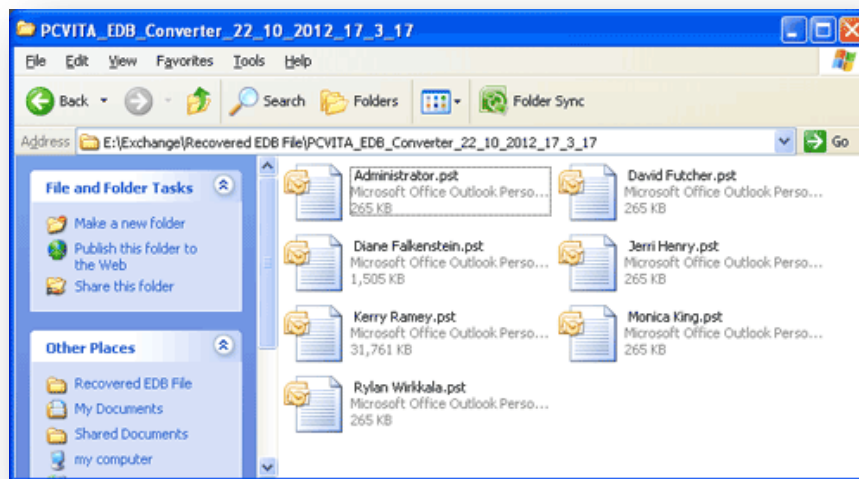

10. Exporting process begins, you can view the number of exported items. An advance option is here "Skip This Mailbox". If you find out that few mailboxes are large sized and taking too long to export or some undesired mailboxes are still there then you can skip those mailboxes using **Skip This** button.

11. As the conversion process gets over, confirmation screen comes up that shows saved location of exported pst file. Click on **Ok** button to close the window:

12. **Browse** saved location to get exported pst files. Now you can use pst file with Exchange Server or MS Outlook.

How to Import PST File:

PST file can be imported into Exchange Server or MS Outlook. Match exchange editions and proceed further:
