## Introduction:

**PCVITA** PST Xtractor is multi-purpose application to convert PST file into multiple file formats without installing MS Outlook. Use the application to convert Outlook emails into PDF, EML or MSG file with inbuilt **Images & Attachments** and converts Outlook contacts into VCF (vCard) formats. Tool provides options to export all emails into PDF format **With or Without Email Header**. Keeps all information and properties of emails (To, cc, bcc, from, date, time, subject etc) as it is. Provides Naming Convention option to create output files with chosen naming format. Product is also capable to repair minor corrupted pst files & preserves folder hierarchy.

# Software Working Steps

1. Launch PCVITA PST Xtractor. For that, Go to Start button >> All Programs >> Click on PCVITA PST Xtractor >> PST Xtractor. Startup screen of the software comes up. Now click **Browse** button to select the PST file.

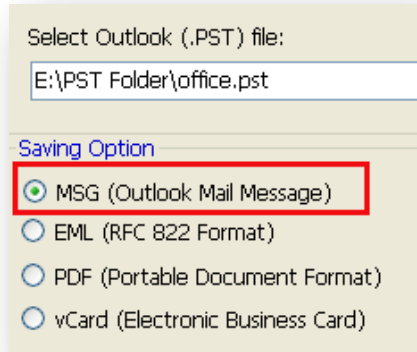

2. "Open" window comes up, select the desired PST file and Click on **Open** button.

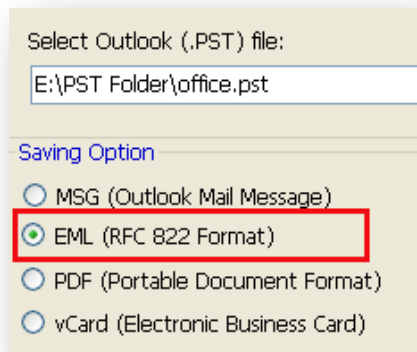

3. From software screen, select Saving Option to export PST file into desired file format. (Here, we have selected PDF format).

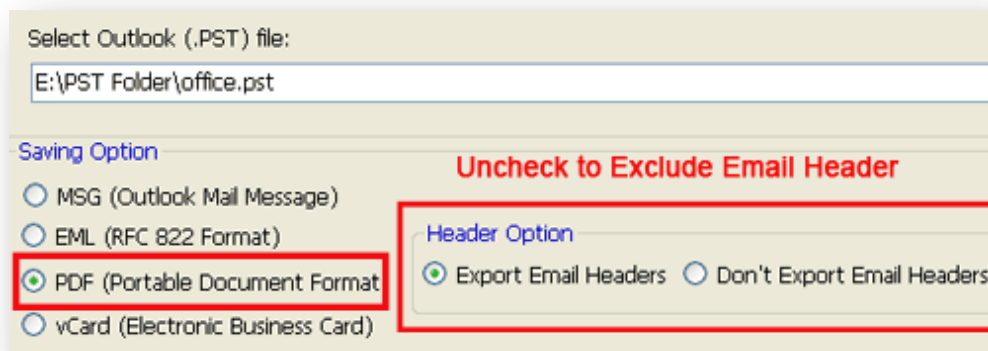

i) **Select MSG** if you want to convert PST emails into MSG format (MS Outlook).

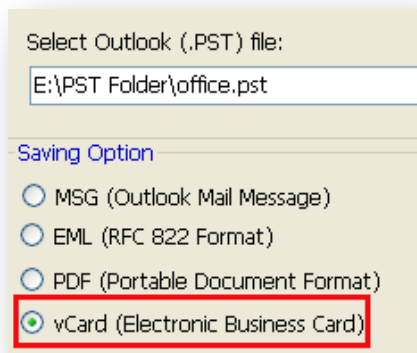

ii) **Select EML** if you want to convert PST emails into EML format (Outlook Express, Windows Mail, Windows Live Mail, Thunderbird etc).

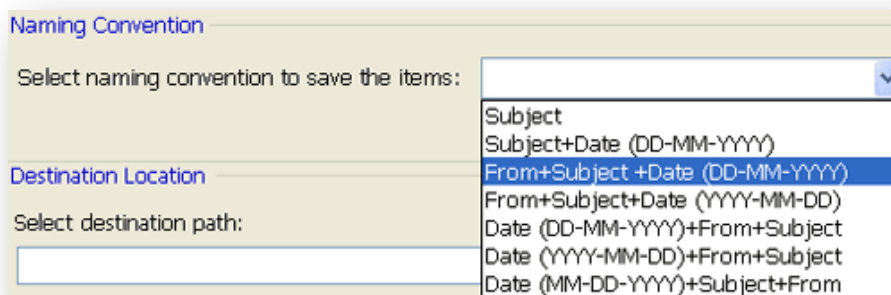

iii) **Select PDF** if you need to convert PST emails into PDF format (Adobe Acrobat). Also select **Export Email Headers** option to export emails with headers otherwise Email headers will not be exported by default.

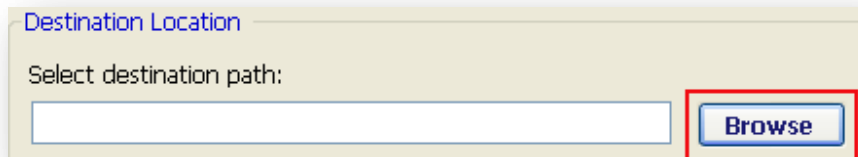

iv) **Select vCard** if you want to export PST contacts into VCF format (Windows Mail, Thunderbird, Lotus Notes, Apple Mail, Blackberry, HTC, iPhone, Nokia, Samsung etc).

4. Select Naming Convention option (Applicable for emails only) to set the display name for output files. Files name will be created as per as selected format.

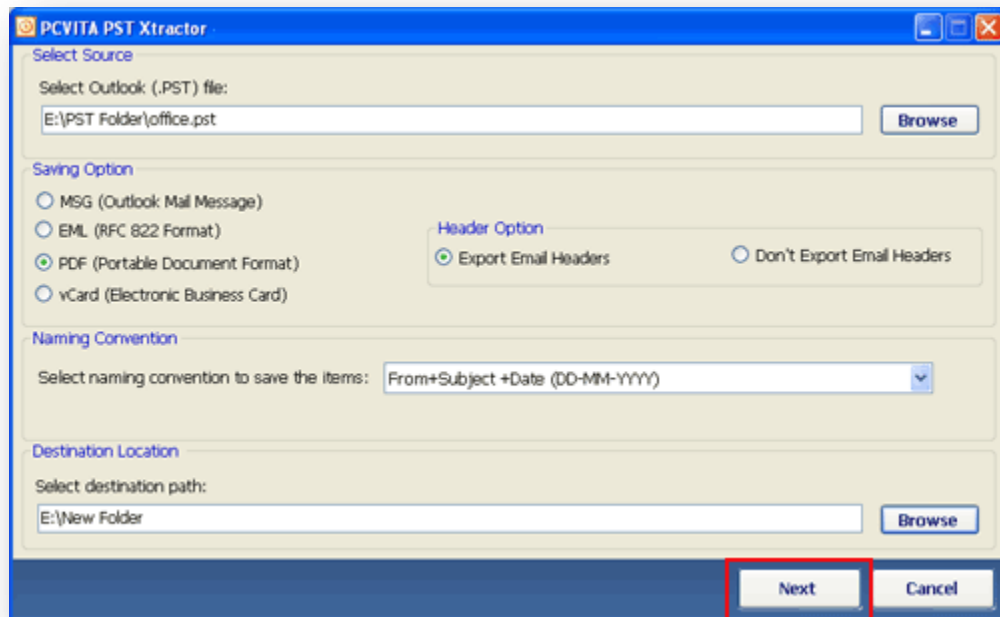

5. Click on **Browse** button to select a desired location to save output files.

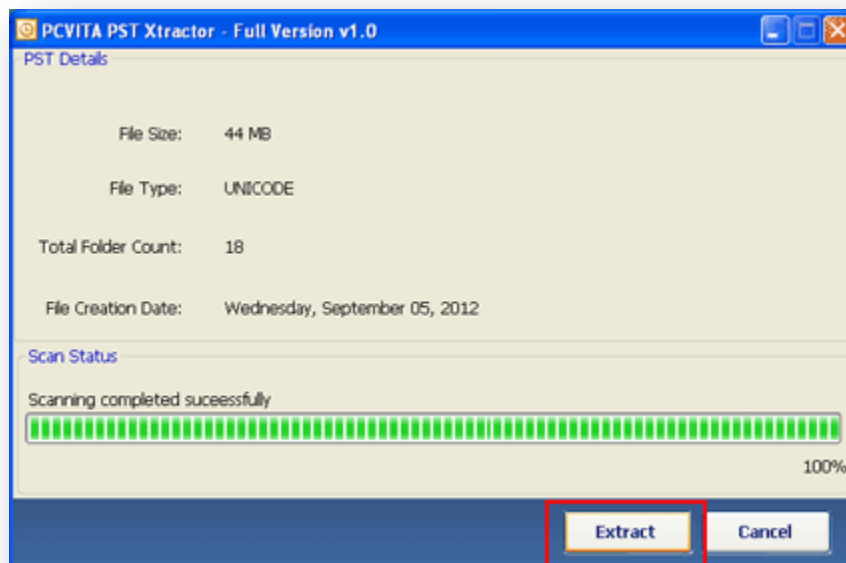

6. “Browse for Folder” window comes up, select desired location and click on **Ok** button. (As per the need, you can create a new folder too).

7. Once all fields are fulfilled then review selected options (As per the need, you can modify any options). Click on **Next** button to proceed further.

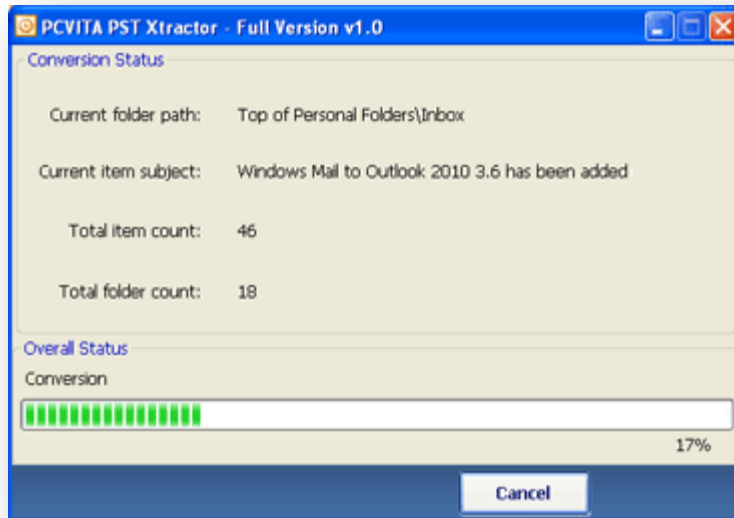

8. Scanning process begins, status bar shows the percentage of scanned PST file. Wait until the process gets over, it may take time if file is corrupted or size is very large. Once process get over, click on **Extract** button to start the extraction process.

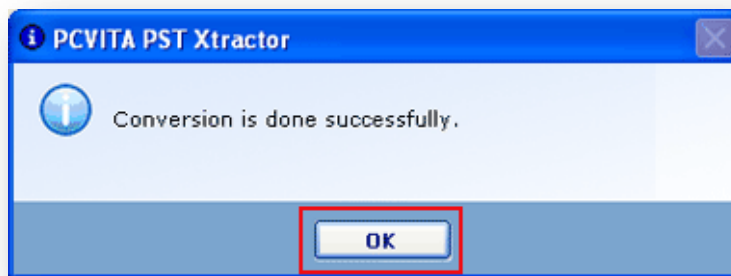

9. Conversion process begins, monitor the Conversion Status by Total Item Count and Total Folder Count etc. Status bar indicates overall percentage of converted PST file.

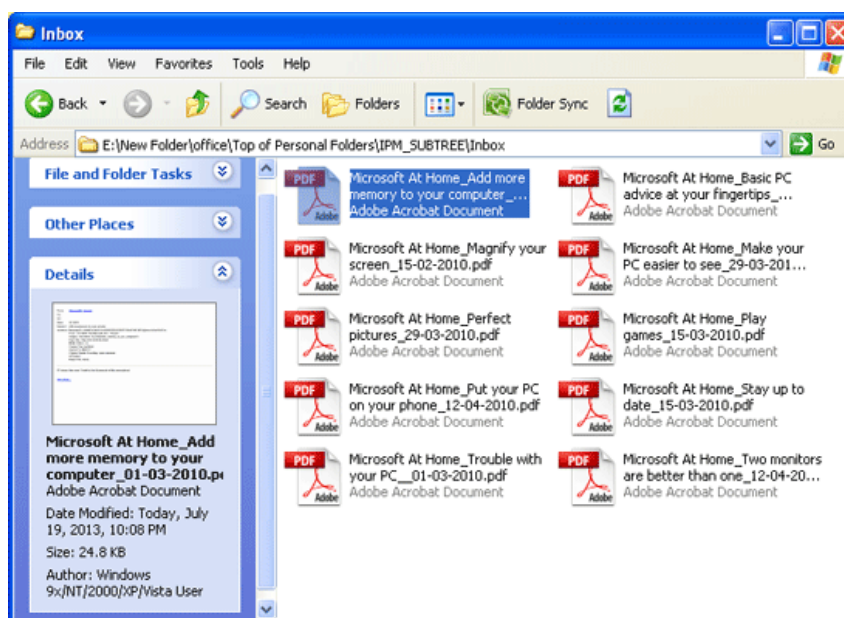

10. On completion of PST file conversion process, confirmation screen comes up. Click on **Ok** button.

11. **Browse** saved location to get Output PDF files.
